

Chester Road Special Ballot Voting Results

At the traffic calming public hearing, City Council pulled Chester Road and asked for a new traffic calming evaluation to determine the effectiveness of two new stop sign installations. The new evaluation found lower speeds along the street. Based on the new study, City Council asked for a new vote from the street and surrounding neighborhood residents before rendering a final decision. Voting has ended and the votes have been tabulated. The numbers below show the percentage of ballots returned and of the returned ballots, the percentage that approve of a project. At the January 22, City Council meeting staff will make a formal presentation and seek approval to move the street on to construction.

	Street		Neighborhood	
	Participation Threshold (60%)	Support Threshold (70%)	Participation Threshold (25%)	Support Threshold (60%)
STREET NAME				
Chester Road	80.95%	70.59%	40.18%	46.67%

The shaded boxes are those that failed to meet the participation and approval thresholds stated in the Neighborhood Traffic Management Program (NTMP) policy.
